

# CHBC Provincial Pediatric Asthma Sim – Mild/Moderate

## Section 1: Case Summary

|                            |   |
|----------------------------|---|
| <b>Scenario Title:</b>     | <b>Mild/Moderate Pediatric Asthma</b>   |
| Keywords:                  |   |
| Brief Description of Case: | This is a case of a child who presents to the emergency department or urgent care center with 2 days of worsening cough, congestion, and fever. The patient presented to hospital the previous winter with a runny nose, cough, and wheeze. The patient begins as a mild PRAM score but progresses to a moderate score. Depending on initial management, patient may remain moderate or improve to the mild category. |

| Goals and Objectives             |   |
|----------------------------------|---|
| Educational Goal:                | Demonstrate management of mild/moderate pediatric asthma using the Child Health BC Asthma Guideline initial management recommendations for mild/moderate PRAM score.  |
| Objectives:<br>(Medical and CRM) | <p>Knowledge:</p> <ol style="list-style-type: none"> <li>1. Discuss and demonstrate recognition of pediatric asthma illness severity.</li> <li>2. Demonstrate understanding of engaging with specialist support and consideration of transfer to local emergency department if in urgent care setting.</li> </ol> <p>Technical Skills:</p> <ol style="list-style-type: none"> <li>1. Recognition of asthma severity utilizing the Pediatric Respiratory Assessment Measure (PRAM) Scoring Table.</li> <li>2. Demonstrate skills of basic management of asthma.</li> </ol> <p>Non-technical Skills:</p> <ol style="list-style-type: none"> <li>1. Demonstrate use of the CHBC Provincial Pediatric Asthma Guideline</li> <li>2. Demonstrate effective closed loop communication and defined role clarity.</li> <li>3. Demonstrate resource management and critical thinking.</li> </ol> <p><b>NOTE:</b> The BC Simulation Network's Crisis Resource Management Reference (CRM model v9) in Appendix A outlines the components of effective CRM and can also be downloaded from the BC Simulation Network <a href="#">Simulation Resources Page</a></p> |
| EPAs Assessed:                   | N/A   |

| Learners, Setting and Personnel     |  |   |   |

## Facilitator Notes

### BEFORE THE SIMULATION

#### 1) Pre-brief the group:

- a. Welcome – introductions, sign-in
- b. Review overall format including approximate time for simulation and debrief. Remind that debrief often takes longer than scenario, but is the most important part
- c. Confidentiality – Review the steps taken to ensure the psychological safety of participants
- d. Engagement – Recognize this is a simulated environment but try to buy-in, the more you put into it and the more you'll get out of it

#### 2) Provide Orientation (failing to give proper orientation may set participants up for failure):

- a. Manikin, monitors, code cart, meds & fluids, diagnostics, calling for help
- b. Child Health BC Provincial Documents
  1. [Child Health BC Provincial Pediatric Asthma Guideline](#)
  2. [Child Health BC Pediatric Respiratory Assessment Measure \(PRAM\) Scoring Table](#)
  3. [Initial Management of Pediatric Asthma Exacerbations Algorithm and Medication Reference](#)
  4. [PEWS ED Vital Sign Record 1 to 3 years](#)
- c. Equipment/Procedures in the case as needed – do a needs assessment (i.e. How to use Broselow tape and cart, IO insertion, pediatric fluid bolus etc.)

#### 3) Scenario briefing:

- a. Review learning objectives with participants (knowledge/technical and non-technical skills)
- b. Roles – discuss roles, assign as needed

## Section 2A: Initial Patient Information

| A. Patient Chart  |         |              |  |                         |                       |
|---|---------|--------------|--|-------------------------|-----------------------|
| Patient Name:   |         | Age: 3 years | Gender:  | Weight: 16kg            |                       |
| Presenting complaint: Cough/ Congestion (CTAS 3)  |         |              |  |                         |                       |
| Temp: 37.6  | HR: 147 | BP: 90/60    | RR: 45   | O <sub>2</sub> Sat: 93% | FiO <sub>2</sub> : RA |
| Cap glucose: 5.5 mmol   |         |              | GCS: 15 (E V M ); Alert; PAT – Alert, Tachypneic, Pink |                         |                       |
| Triage note:<br>Parents state 2-day history of unwell with worsening cough, runny nose and fever. UTD on immunizations. |         |              |  |                         |                       |
| Allergies: No known   |         |              |  |                         |                       |

# CHBC Provincial Pediatric Asthma Sim – Mild/Moderate

|  |                              |
|--|------------------------------|
| Past Medical History:<br>Previous ED/urgent care visit for same – prescribed salbutamol MDI last winter, no refills. | Current Medications:<br>None |
|--|------------------------------|

## Section 2B: Extra Patient Information

| A. Further History   |  |
|--|--|
| <i>Include any relevant history not included in triage note above. What information will only be given to learners if they ask? Who will provide this information (mannequin's voice, sim actors, SP, etc.)?</i> |  |
| No siblings.<br>No one else in the house is sick.<br>No known exposures.<br>Does not go to daycare.  |  |
| B. Physical Exam   |  |
| <i>List any pertinent positive and negative findings</i>   |  |
| <b>Cardio:</b> Sinus Tachycardia   | <b>Neuro:</b> Alert  |
| <b>Resp:</b> Tachypnea, no visible increased work of breathing. Wheeze throughout on auscultation (inspiratory/expiratory). Good air entry.  | <b>Head &amp; Neck:</b> Unremarkable                                   |
| <b>Abdo:</b> Unremarkable  | <b>MSK/skin:</b> No rash noted. Peripheral/central cap refill 1 second |
| <b>Other:</b>  |  |

## Section 3: Technical Requirements/Room Vision

| <b>A. Patient</b>   |
|---|
| <input checked="" type="checkbox"/> Mannequin ( <i>specify type and whether infant/child/adult</i> ) Child  |
| <input type="checkbox"/> Standardized Patient   |
| <input type="checkbox"/> Task Trainer   |
| <input type="checkbox"/> Hybrid   |
| <b>B. Special Equipment Required</b>  |
| <ul style="list-style-type: none"> <li>• Cardiac monitoring, SpO<sub>2</sub>, BP</li> <li>• CTAS scoring aid and CEDIS coding sheet</li> <li>• Age-appropriate PEWS documentation tools</li> <li>• Child Health BC Pediatric Asthma Management Guideline</li> <li>• Regional Pediatric Asthma Pre-Printed Orders or electronic order set if available</li> <li>• Broselow tape or scale</li> <li>• Personal protective equipment</li> </ul> |
| <b>C. Required Medications</b>  |
| <ul style="list-style-type: none"> <li>• Medications (salbutamol MDI, ipratropium MDI, dexamethasone PO)</li> <li>• MDI spacer with mask</li> </ul>   |
| <b>D. Moulage</b>   |
| None required   |
| <b>E. Monitors at Case Onset</b>  |
| <input checked="" type="checkbox"/> Patient on monitor with vitals displayed  |
| <input type="checkbox"/> Patient not yet on monitor   |
| <b>F. Patient Reactions and Exam</b>  |
| <p><i>Include any relevant physical exam findings that require mannequin programming or cues from patient (e.g. – abnormal breath sounds, moaning when RUQ palpated, etc.) May be helpful to frame in ABCDE format.</i></p> <p>Airway clear; good air entry, wheezes throughout; tachycardic, pink, capillary refill 1 sec; alert, cooperative; no rash, no injuries</p>  |

## Section 4: Sim Actor and Standardized Patients

| <b>Sim Actor and Standardized Patient Roles and Scripts</b> |   |
|---|---|
| <i>Role</i>   | <i>Description of role, expected behavior, and key moments to intervene/prompt learners. Include any script required (including conveying patient information if patient is unable)</i>                                   |
| Parent  | Answers questions related to patient exam, as applicable. Cooperative with care.<br><br>Prompts during PRAM if patient on O <sub>2</sub> – “Last time they checked, they removed the oxygen. Do you need to do the same?” |

# Simulation Scenario Template

## Section 5: Scenario Progression

| Scenario States, Modifiers and Triggers   |   |  |  |
|---|---|--|--|
| Patient State/Vitals  | Patient Status  | Learner Actions, Modifiers & Triggers to Move to Next State  | Facilitator Notes  |
| <p><b>1. Baseline State</b><br/> <b>Rhythm:</b> Sinus tachy<br/> <b>HR:</b> 165<br/> <b>BP:</b> 85/58<br/> <b>RR:</b> 55; wheeze t/o, insp &amp; exp<br/> <b>O<sub>2</sub> sat:</b> 93% on room air<br/> <b>T:</b> 37.5 °C<br/> <b>Glucose:</b> 5.5 mmol<br/> <b>Wt:</b> 16 kg<br/> <b>PEWS:</b> 3<br/> <b>CVS:</b> cap refill 1 sec<br/> <b>PAT:</b> Pink, Alert, Tachypneic</p> | <p><i>Tachypenic with no visible increased work of breathing. Sitting up in bed, appears comfortable. Frequent cough.</i></p> | <p><u>Expected Learner Actions</u><br/> <input type="checkbox"/> Calculate PRAM score = 3<br/> <i>O<sub>2</sub> saturation (92-94%) - 1</i><br/> <i>Inspiratory/expiratory wheezing - 2</i><br/> <input type="checkbox"/> Vital signs (including HR, RR &amp; SpO<sub>2</sub> assessed)<br/> <input type="checkbox"/> Inform most responsible physician of PRAM score<br/> <input type="checkbox"/> Salbutamol 5 puffs via MDI with spacer and mask x1</p> | <p><u>Triggers</u><br/> <i>For progression to next state</i><br/>                     - Salbutamol administered with spacer/mask &gt; progress to stage 2<br/> <i>OR</i><br/>                     - 5 mins with ineffective management</p> <p><u>Physicians Orders:</u></p> <ul style="list-style-type: none"> <li>• Salbutamol 500 mcg (5 puffs) per MDI with spacer and mask x1</li> <li>• Reassess PRAM 20 minutes after dose and if PRAM greater than 3, call MRP</li> <li>• If participants ask for diagnostics (labs, CXR, etc.) facilitator can prompt: no diagnostics needed at this time</li> </ul> <p><b>Notes:</b> Facilitator can verbally progress scenario to stage 2 once salbutamol given (20 min time lapse for reassessment) or if no salbutamol administered (deterioration of patient)</p> |
| <p><b>2. Reassessment of PRAM - Moderate</b><br/> <b>Rhythm:</b> Sinus tachy<br/> <b>HR:</b> 180<br/> <b>BP:</b> 90/60<br/> <b>RR:</b> 62; wheeze throughout, inspiratory &amp; expiratory<br/> <b>O<sub>2</sub> sat:</b> 91% RA</p>  | <p><i>Increased work of breathing (suprasternal and intercostal retractions noted). Remains alert, tachypneic.</i></p>        | <p><u>Expected Learner Actions</u><br/> <input type="checkbox"/> Reassess PRAM score = 6<br/> <i>O<sub>2</sub> Saturation (&lt;92%) - 2</i><br/> <i>Inspiratory/Expiratory wheezing - 2</i><br/> <i>Suprasternal retractions - 2</i><br/> <input type="checkbox"/> Administer O<sub>2</sub> @ 1L to maintain sats &gt;92%<br/> <input type="checkbox"/> Notify MRP of increased PRAM<br/> <input type="checkbox"/> Consider RRT consult, if available</p>  | <p><u>Modifiers</u><br/> <i>Changes to patient condition based on learner action</i><br/>                     - O<sub>2</sub> applied &gt; 95% SpO<sub>2</sub> (goes down to 91% when O<sub>2</sub> removed)<br/>                     -<br/>                     -</p> <p><u>Triggers</u><br/>                     - no MDI treatment &gt; Stage 3 Moderate PRAM</p> <p><u>Physicians Orders:</u></p> <ul style="list-style-type: none"> <li>• Salbutamol 500 mcg (5 puffs) via MDI with spacer &amp; mask q20min x3</li> <li>• Ipratropium 60 mcg (3 puffs) via MDI with spacer &amp; mask q20 min x3</li> <li>• Dexamethasone: 0.6 mg/kg/dose (max 16 mg/dose) PO</li> </ul>   |

# Simulation Scenario Template

|  |   |   |  |  |
|--|---|---|--|--|
| <p><b>T:</b> 37.6 °C<br/> <b>PEWS:</b> 5<br/> <b>PAT:</b> Pink, Alert, Tachypnea with suprasternal retractions &amp; intercostal indrawing</p>   |   | <p><input type="checkbox"/> Give medications as per physician orders<br/> <input type="checkbox"/> Gives MDIs q20 mins x3 (after 1<sup>st</sup> round of medication – facilitator progresses to next stage)</p>   | <p>- 1 round of appropriate medication administration (salbutamol, ipratropium, dexamethasone) &gt; Stage 4 Mild Pram through facilitator prompt</p>   | <ul style="list-style-type: none"> <li>If participants ask for diagnostics (labs, CXR, etc.) facilitator can prompt: no diagnostics needed at this time</li> </ul> <p><b>Notes:</b> Facilitator to advance simulation to 4th stage after 1<sup>st</sup> round of medication (1 dose – salbutamol, ipratropium &amp; dexamethasone) administered: “patient presentation has remained unchanged you have given an additional 2 doses of salbutamol and ipratropium MDI every 20 minutes, it is now 1 hour since you began the back-to-back MDIs”</p> |
| <p><b>3. Reassessment of PRAM (Insufficient treatment)</b><br/> <b>Rhythm:</b> Sinus tachy<br/> <b>HR:</b> 189<br/> <b>BP:</b> 90/60<br/> <b>RR:</b> 70; wheeze throughout, inspiratory &amp; expiratory<br/> <b>O<sub>2</sub> sat:</b> 90% RA<br/> <b>T:</b> 37.6 °C<br/> <b>PEWS:</b> 5<br/> <b>PAT:</b> Pink, Alert, Tachypnea with</p> | <p><i>No change – remain in this stage if managed insufficiently in previous stage.</i></p> | <p><u>Expected Learner Actions</u><br/> <input type="checkbox"/> Calculate PRAM Score = 6<br/> <i>O<sub>2</sub> saturation -2</i><br/> <i>Inspiratory/Expiratory wheezing – 2</i><br/> <i>Suprasternal retractions - 2</i><br/> <input type="checkbox"/> Administer O<sub>2</sub> @ 1 L/min to maintain saturations &gt;92%<br/> <input type="checkbox"/> Inform MRP of updated PRAM score<br/> <input type="checkbox"/> Consider RT consultation if available<br/> <input type="checkbox"/> Salbutamol 5 puffs (can repeat q30-60 minutes)<br/> <input type="checkbox"/> Consider consult pediatrician</p> | <p><u>Modifiers</u><br/> - SpO<sub>2</sub> decrease to 91% when O<sub>2</sub> removed for PRAM score<br/> - Improve SpO<sub>2</sub> to 95% when oxygen reapplied</p> <p><u>Triggers</u><br/> - Management insufficient &gt; End Scenario<br/> - Management sufficient &gt; progress to Stage 4 Mild PRAM</p> | <p><u>Physician Orders:</u></p> <ul style="list-style-type: none"> <li>Salbutamol 500 mcg (5 puffs) via MDI with spacer &amp; mask q20min x3</li> <li>Ipratropium 60 mcg (3 puffs) via MDI with spacer &amp; mask q20 min x3</li> <li>Dexamethasone: 0.6 mg/kg/dose (max 16 mg/dose) PO</li> </ul> <ul style="list-style-type: none"> <li>If participants ask for diagnostics (labs, CXR, etc.) facilitator can prompt: no diagnostics needed at this time</li> </ul>  |

# Simulation Scenario Template

|   |  |   |  |   |
|---|--|---|--|---|
| suprasternal retractions & intercostal indrawing  |  |   |  | <b>Notes:</b> Remain in stage 3 for a total of 3 rounds of MDI, no changes in VS during this time. Facilitator to verbally notify participants of 20 min time lapse after each MDI  |
| <b>4. Improved – Mild PRAM</b><br><b>Rhythm:</b> Sinus tachy<br><b>HR:</b> 165<br><b>BP:</b> 90/60<br><b>RR:</b> 55; wheeze throughout exp<br><b>O<sub>2</sub> sat:</b> 95% RA<br><b>PEWS:</b> 3<br><b>PAT:</b> Pink, Alert, Tachypneic | <i>Appears to have made improvements, with normal work of breathing. PRAM score <3, 2. no signs of resp distress, 3. good a/e with mild exp wheeze, 4. O <sub>2</sub> sats >92% on RA, 5. no expected need for bronchodilators more than q4h).<br><br>Minimum 1 hour observation period. |

# Simulation Scenario Template

## Appendix A: Facilitator Cheat Sheet & Debriefing Tips

Include key errors to watch for and common challenges with the case. List issues expected to be part of the debriefing discussion. Supplemental information regarding any relevant pathophysiology, guidelines, or management information that may be reviewed during debriefing should be provided for facilitators to have as a reference.

**Facilitator Debrief Guide:** Facilitate a conversation with the group following the BC Hot Debriefing Guide (Appendix C) which can be downloaded from the BC Simulation Network [Simulation Resources Page](#)

|          |   |
|----------|---|
| <b>S</b> | <p><b>Summarize the Case</b><br/>Example Question: "Can someone summarize the case <i>in one or two sentences?</i>"</p>   |
| <b>T</b> | <p><b>Things that went well</b><br/>Example Question: "What did you think you did well?"</p> <p><b>Review: Did we accomplish the Learning Objectives?</b></p> <p>Knowledge:</p> <ul style="list-style-type: none"> <li>• Discuss and demonstrate recognition of pediatric asthma and illness severity (PRAM scoring)</li> <li>• Demonstrate understanding of when to engage specialist support, and consideration of transfer to higher level of care</li> </ul> <p>Technical Skills:</p> <ul style="list-style-type: none"> <li>• Demonstrate basic management of asthma</li> <li>• Demonstrate use of PRAM Scoring Table</li> <li>• Demonstrate use of Initial Management of Pediatric Asthma Exacerbations Algorithm (Mild &amp; Moderate PRAM) and Medication Reference</li> <li>• Demonstrate resuscitation skills</li> </ul> <p>Non-technical Skills:</p> <ul style="list-style-type: none"> <li>• Demonstrate effective closed loop communication and defined role clarity.</li> <li>• Demonstrate crisis resource management and critical thinking</li> <li>• Demonstrate use of the CHBC Provincial Pediatric Asthma Guideline</li> </ul>  |
| <b>O</b> | <p><b>Opportunities to Improve</b><br/>Example Question: "What would you change next time?"</p> <p><b>KEY DEBRIEF POINTS:</b></p> <ul style="list-style-type: none"> <li>• Regardless of their PRAM score, children with decreased level of consciousness, agitation, cyanosis, decreased respiratory effort and/or confusion should be considered to have impending respiratory failure.</li> <li>• Beta-agonist treatment with MDI/spacer is clinically equivalent with fewer side effects and shorter ED length of stays compared with nebulization</li> <li>• Early administration of steroids alternated with initial beta-agonists in the first 60 minutes shortens respiratory distress and decreases hospitalization for those with a moderate PRAM score</li> <li>• Engage local pediatrician on-call through local operator/on call system; or CHARLiE via Zoom at <a href="mailto:charlie1@rccbc.ca">charlie1@rccbc.ca</a> or phone (236)305-5352</li> <li>• Early consultation to discuss patient management and transport is advised when the patient has persistent/severe respiratory distress or impending respiratory failure. Contact a higher level of care referral center to consult with a pediatrician/pediatric intensivist via Patient Transfer Network (PTN) (1-866-233-2337)</li> <li>• <a href="#">Nursing &amp; Respiratory Therapist Support from Provincial Pediatric Intensive Care Units (PICU)</a></li> </ul> |
