**Zoom Remote Control of Mouse**
ZOOM Remote Control of Mouse Function

During ZOOM webinars and meetings, there is the ability of the host to take remote control of the mouse activity of a panelist or participant. There are a number of specific clinical scenarios that require this functionality. These are the steps to use to have this functionality during the virtual health visit.

N.B: Depending on who needs to control whose mouse, the host may have to grant host capabilities to the panelist/participant.
From the participant list, select the panelist/participant to whom you will grant "host capabilities". Select the panelist/participant that you want to grant host capabilities. Click **More**. A menu appears, select **Make Host.** Click **Yes** on the popup.
When you are done sharing the screen/taking control of the mouse function, the initial host should reclaim the host function. From the bottom of the participant pane, select Reclaim Host.
Remote control of Mouse

1. When in a ZOOM webinar or meeting, the host clicks on Share Screen. Have a document (with no patient identifiers) on your desktop to share.
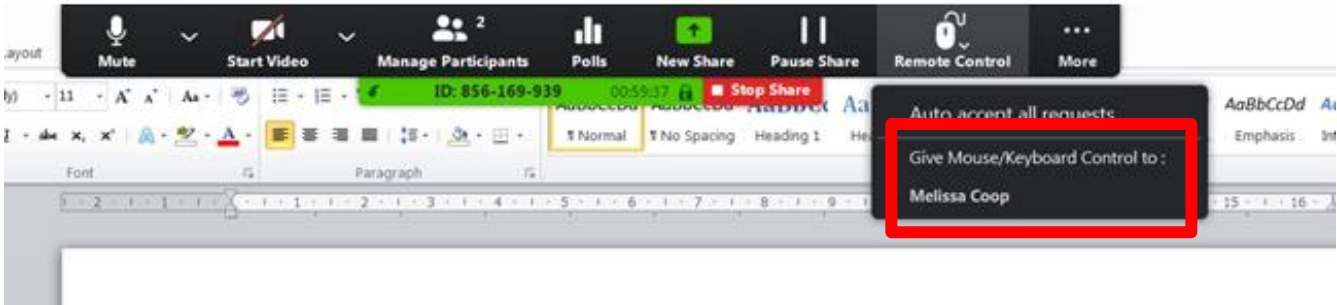

2. While in Share Screen, click on the Remote Control "mouse" icon.
