

PEDiatric RESPIRATORY SEASON RESOURCES FOR HEALTH CARE PROVIDERS IN PRIMARY CARE SETTINGS

In preparation for increased rates of pediatric respiratory infections, the following resources have been compiled for pediatric health care providers.

During the respiratory season, children/youth and families should continue to practice personal prevention measures: cleaning hands often, monitoring for symptoms of illness, staying home when sick and practicing respiratory etiquette i.e. masking in indoor public spaces if symptomatic. Encouraging routine childhood immunizations, seasonal influenza and the COVID-19 vaccine for those who are eligible, is an important role for health care providers working with infants, children and youth.

COMMON RESPIRATORY CONDITIONS

[Asthma Care Across Community Settings](#) provides provincial primary care, urgent care and emergency department guidelines, fillable/printable patient action plans, posters, resource cards, and educational materials for families and caregivers. Resources are available in multiple languages.
